## PROFESSIONAL SUMMARY

---

Full-stack Software Engineer with 3+ years building, deploying, and scaling production web applications using Django, Angular, and AWS. Experienced in designing REST APIs, CI/CD pipelines, and automation systems that improve reliability and performance across high-traffic environments. Proven track record shipping features that directly impact revenue and user experience.

## SKILLS

---

|                           |                                                                          |
|---------------------------|--------------------------------------------------------------------------|
| <b>Languages</b>          | Python, JavaScript, HTML5, CSS3                                          |
| <b>Frameworks</b>         | Django, FastAPI, Angular, Bootstrap                                      |
| <b>Databases</b>          | MySQL, PostgreSQL, MongoDB, SQLite                                       |
| <b>Cloud &amp; DevOps</b> | AWS EC2, AWS Lightsail, Jenkins, Docker, GitHub Actions, CI/CD Pipelines |
| <b>Architecture</b>       | REST APIs, WebSockets, Microservices                                     |
| <b>Automation</b>         | Selenium, Playwright, BeautifulSoup, Pyautogui                           |
| <b>ML</b>                 | Scikit-learn, Pandas, Matplotlib                                         |
| <b>Security</b>           | JWT Authentication, RBAC                                                 |

## PROJECTS

---

### Solvers Global – Overseas Consultancy Platform (2025)

GitHub: [https://github.com/Gokulgopan01/Solver\\_global](https://github.com/Gokulgopan01/Solver_global)

Live Site: [solversglobal.in/](https://solversglobal.in/)

- Designed and deployed a scalable consultancy platform using Angular and FastAPI with a microservices-ready architecture built for future scale.
- Built asynchronous backend APIs using FastAPI and AioMySQL, reducing response latency under concurrent load.
- Secured the platform with JWT authentication, role-based access control, and API rate limiting.
- Improved application performance through caching, pagination, and lazy loading, cutting page load times.

### Tail Cart – E-Commerce Platform

GitHub: [github.com/Gokulgopan01/Tail-Cart-frontend](https://github.com/Gokulgopan01/Tail-Cart-frontend)

Live Site: [tailcart.vercel.app/auth](https://tailcart.vercel.app/auth)

- Designed and deployed a scalable e-commerce platform capable of handling 1,000+ concurrent users.
- Implemented JWT-based authentication and role-based authorization to secure user access.
- Added WebSocket-based real-time notifications, reducing order update latency by 45%.
- Deployed the application on AWS EC2 with RDS and Load Balancer to ensure high availability.
- Reduced average API response time by 35% by limiting payload size and improving query efficiency.

### Stock Prediction Model

GitHub: [github.com/Gokulgopan01/Stock-AI](https://github.com/Gokulgopan01/Stock-AI)

- Built a machine learning-based predictive model to forecast short-term stock price movements.
- Used Scikit-learn, Pandas, and historical stock datasets to train and evaluate regression models.

## EXPERIENCE

---

## Senior Support Engineer

Ecesis Technologies

Mar 2026 - Present

Kerala, India

- Architected and led production deployment strategy for multiple internal and client-facing applications, improving release reliability across environments.
- Designed and managed AWS cloud infrastructure (EC2, RDS, Load Balancers) to support scalable, highly available applications.
- Partnered with cross-functional engineering teams to build automation systems and scalable web applications, driving technical decisions during client-facing project delivery.

## Software Support Engineer

Ecesis Technologies

Mar 2024 – Mar 2026

Kerala, India

- Engineered and led deployment/release architecture for production applications using AWS EC2, RDS, and Jenkins, improving deployment reliability
- Built and scaled full-stack web applications serving 1,000+ daily users, powering core business and automation workflows.
- Designed CI/CD pipelines that cut manual deployment effort and accelerated feature delivery across dev and production environments.
- Developed revenue-generating automation features adopted in customer-facing products, contributing to increased company revenue.
- Implemented JWT authentication and role-based access control across production services, strengthening application security.

## Junior Support Engineer

Ecesis Technologies

Mar 2023 - Mar 2024

Kerala, India

- Built scalable full-stack applications with Django, Angular, and MySQL to power internal business operations.
- Engineered Selenium-based automation tooling that cut repetitive manual work by 60%.
- Diagnosed and fixed functional and performance issues, increasing internal product quality metrics from 62% to 92% using playwright automation.
- Collaborated with senior engineers to optimize backend APIs and database queries, accelerating feature delivery.

## Full Stack Intern

One Team Solutions

Sep 2022 - Feb 2023

Kerala, India

- Developed responsive web interfaces using Django and Angular.
- Improved application performance by refining frontend components and database queries, reducing page load time%.
- Assisted in backend development, API integration, and database management for web applications.

## EDUCATION

---

### Diploma in Computer Engineering (Equivalent to Associate's Degree in Engineering)

2019 - 2022

Government Polytechnic College, Neyyattinkara Thiruvananthapuram, India

**Relevant coursework:** Data Structures, Database Management Systems, Web Technologies, Software Engineering

## AWARDS

---

- Engagement Champion – 2026
- Engagement Champion – 2025
- Newbie of the Quarter – 2023
